FABRIKAM INDUSTRIES

Creo Parametric User Guide

CAD setup and data safety for Creo users

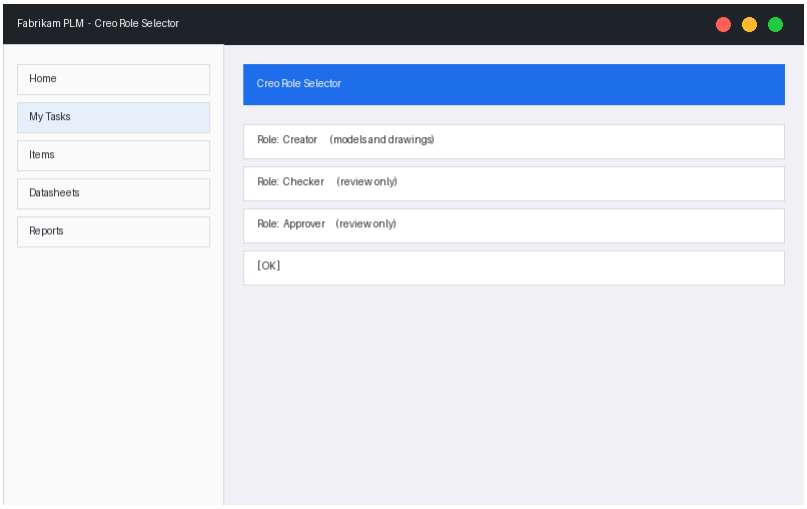
Revision 2.1

PLM Support: plm-support@fabrikam.example (555-0142)

FICTIONAL sample document, generated for demo purposes.

01 - SELECTING A ROLE

When Creo starts, choose a role from the role selector. Select the Creator role to create models and drawings. The Checker and Approver roles are review-only and hide the modelling commands. Your role also decides which templates and layers are available in new files.



02 - CHECKING OUT DEPENDENT FILES

Creo asks you to check out the model before saving a drawing because the drawing references model geometry as dependent files. Checking out locks the model for you, lets the drawing store the new references, and unlocks the model again when you check it back in. Never skip this step on shared assemblies.
