SolidWorks Best Practices

Saving CAD data through the PLM connector

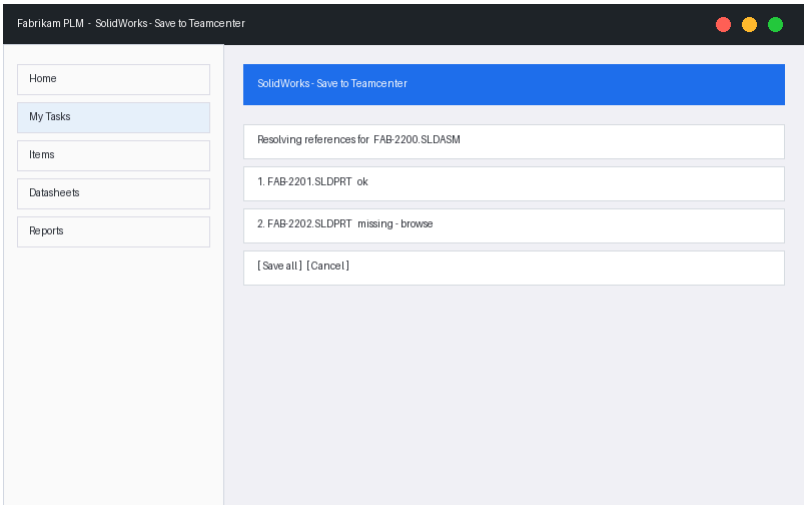
Revision 2.1

PLM Support: plm-support@fabrikam.example (555-0142)

FICTIONAL sample document, generated for demo purposes.

01 - ITEM TYPES IN SOLIDWORKS

When you create a part in SolidWorks and save it to Teamcenter through the connector, the item type Semi-Finished Component is assigned automatically. Assemblies are stored with the item type Product, and drawings with Drawing. Do not change these types manually; downstream reports rely on them.

02 - SAVING AN ASSEMBLY


Save the top-level assembly first, then resolve any missing references in the order the connector lists them. Saving child parts first confuses the structure check and can create duplicate items.
